- Help

Devices function

Allows user to see listing of all managed devices (loads) and device groups. Users can see energy usage information for each device or group. User can see device status (On, off, curtailed, overridden).

User can edit device names, edit device groups, and create new groups. Users can control devices when applicable.

Selecting devices function while within a service page will initially display the devices filtered for relevance to that service.

Rules and schedules function

Allows user to see listing of all current rules and their status. User can edit device names, edit device groups, and create new groups.

Selecting the devices function while within a service page will initially display the devices list filtered for relevance to that service.

Reports function

Allows user to see Alert messages, and other relevant information formatted and displayed for ease of understanding.

Switch function

Returns UI to default switch control functionality. (displays switch function component.)

Energy management Service

Allows user to see macro information on energy usage, cost, current price, and calculated carbon footprint.

Information can be sorted by specific timeframes.

Demand response service

Security service

Allows user to contact security service provider, arm and disarm security system.

VoIP service

Allows user to connect and communicate with other users through VoIP technology.

User service

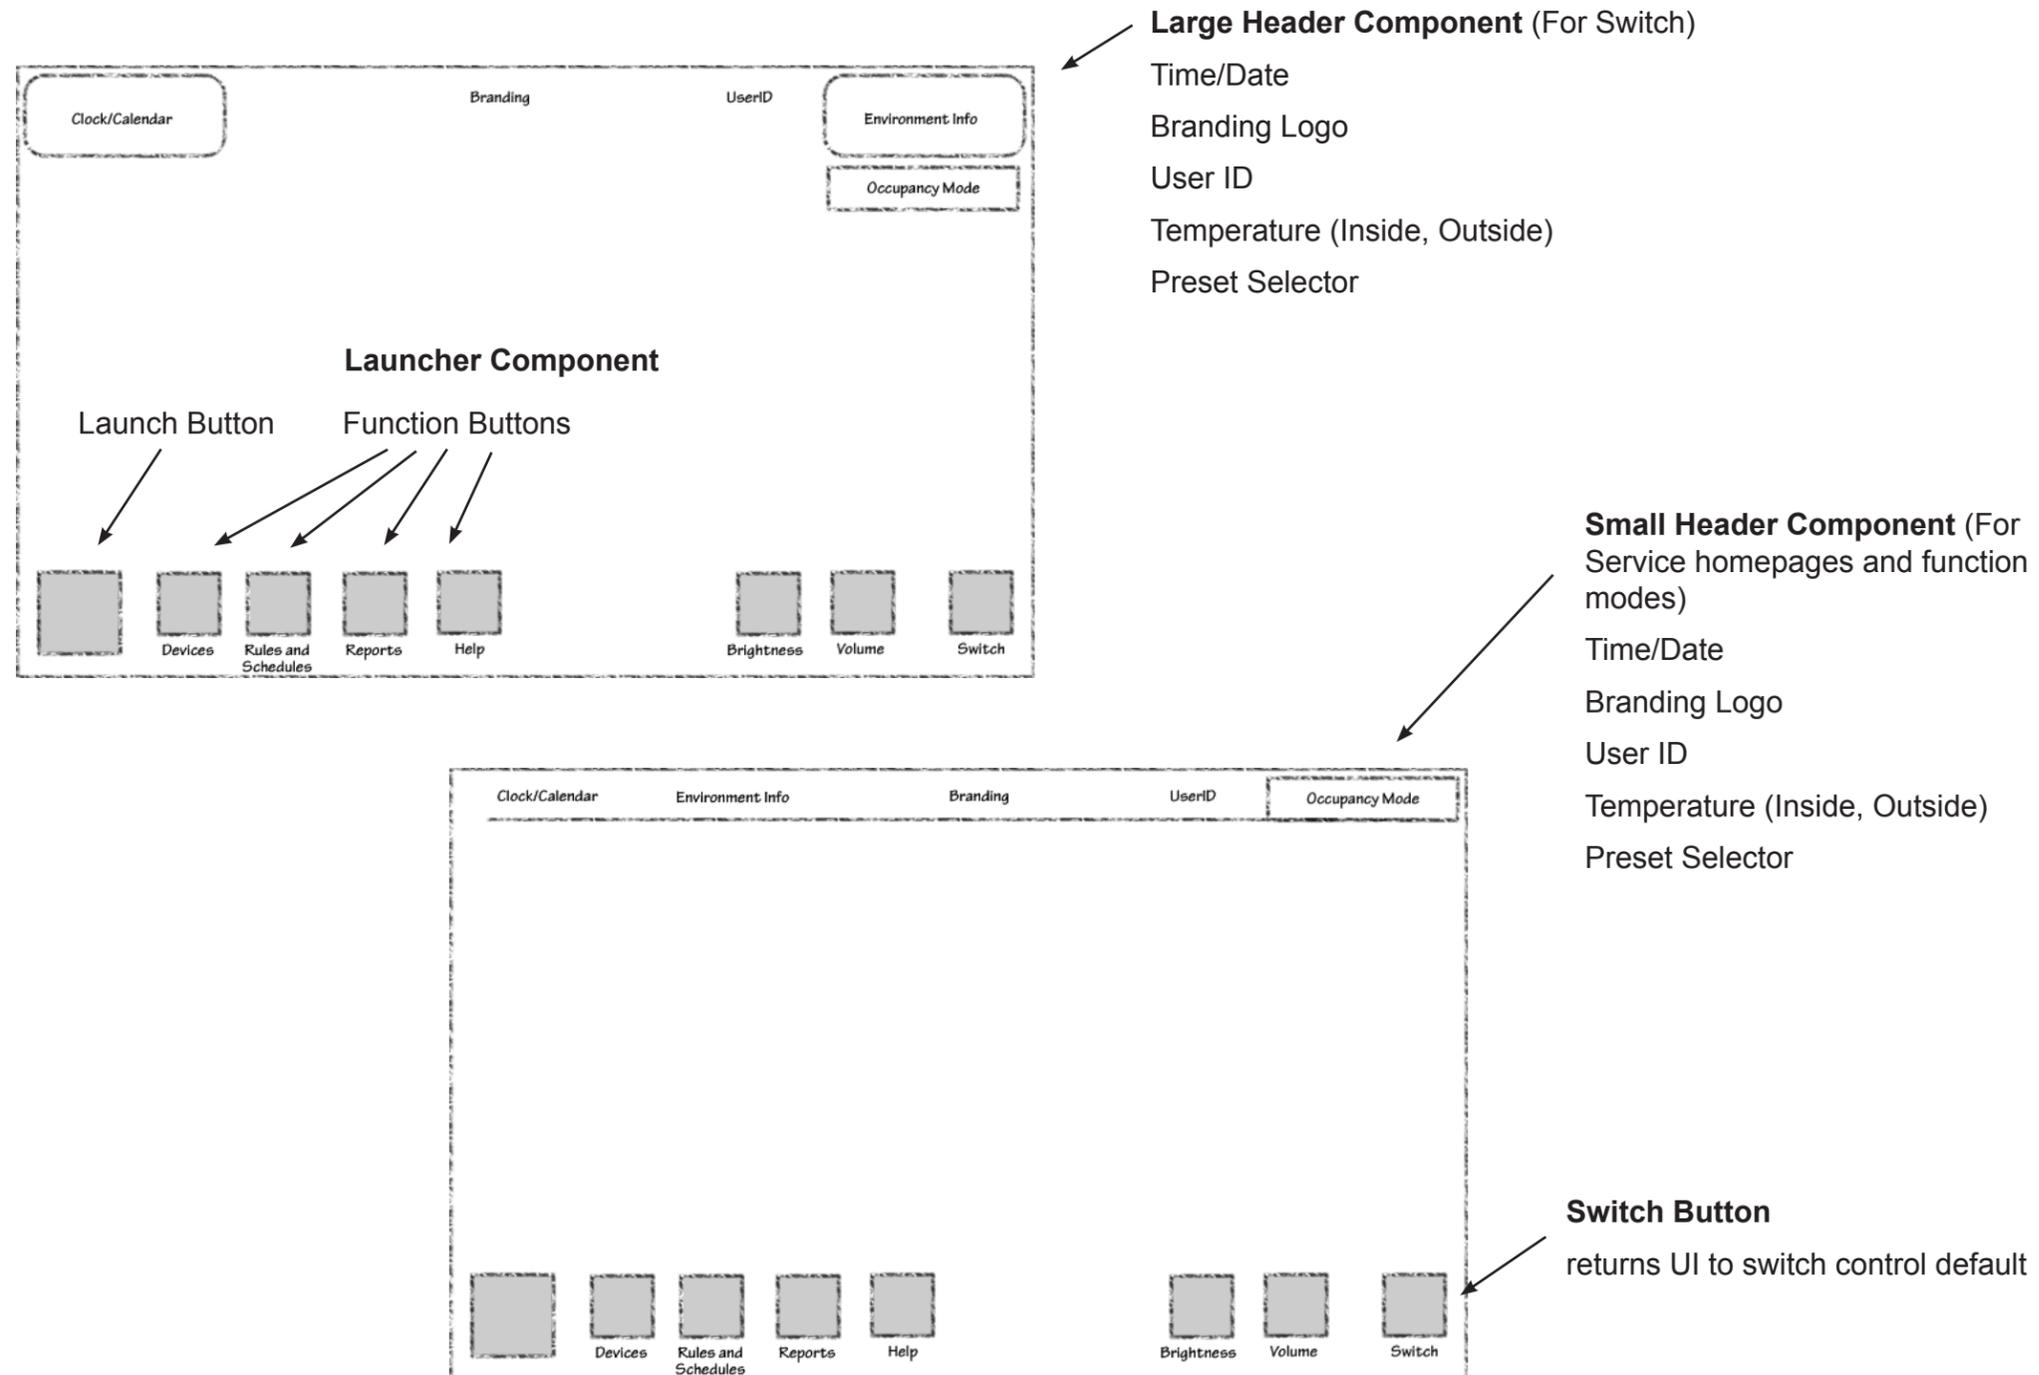

Allows user to access user account functions.

Framework

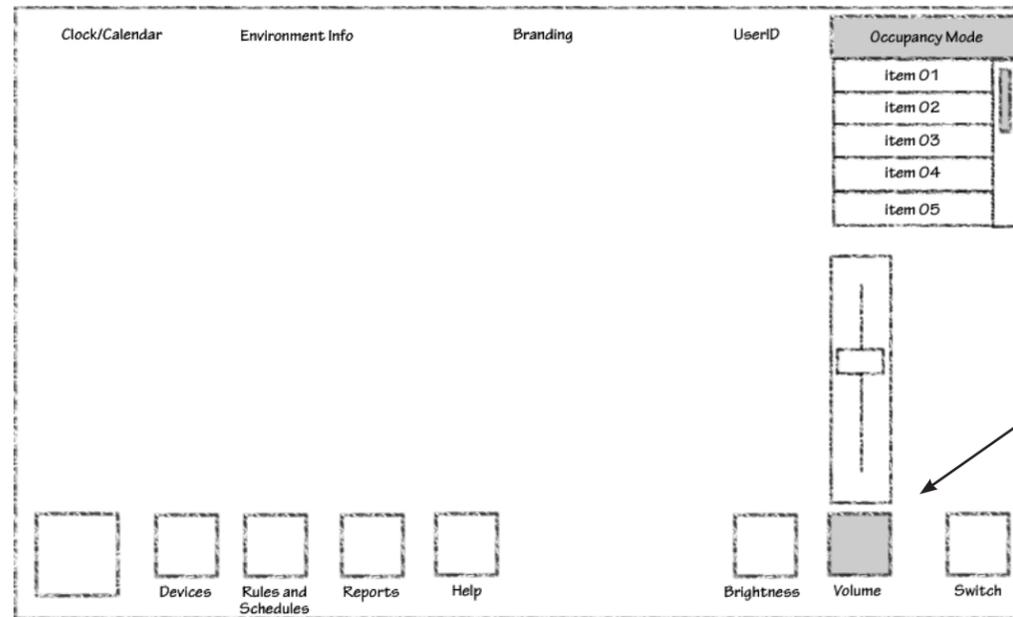

Launcher Component

Launch Button brings up dashboard component

Function Buttons (not visible in switch control default mode) move interface into devices, rules and schedules, reports, and help modes.

Framework -continued-

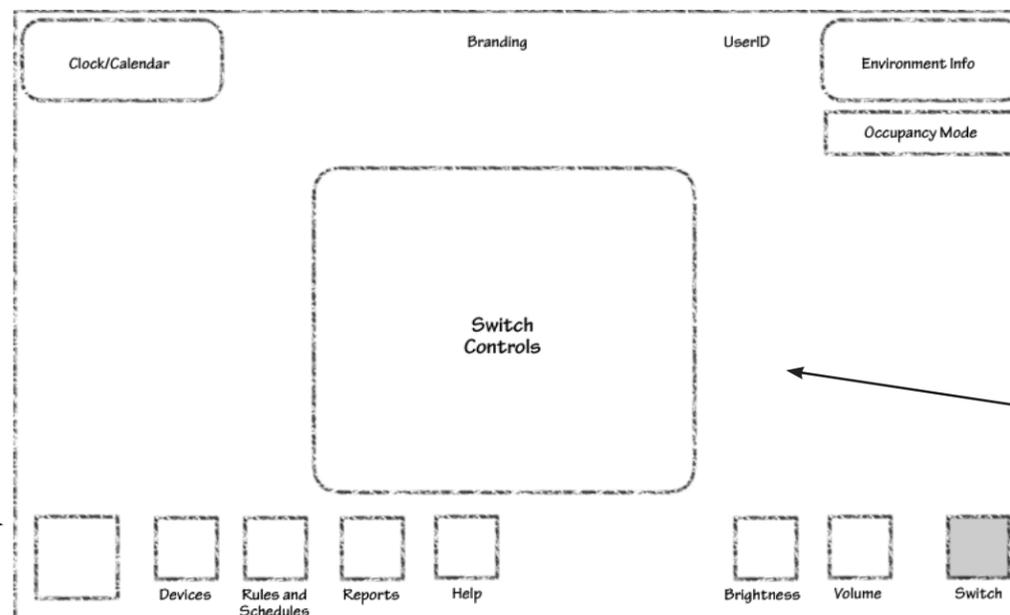

Occupancy Mode Selector

Drop-down menu allows user to select the proper Occupancy Mode setting.
Example: Home, Away, Vacation, etc.

Brightness and Volume Buttons

Allows user to set the master volume level and the display brightness.

Default Switch

Large Header Component

Launcher Component

Launch Button brings up Pin Number Keypad Entry Component; successful authentication brings up the [dashboard component](#)

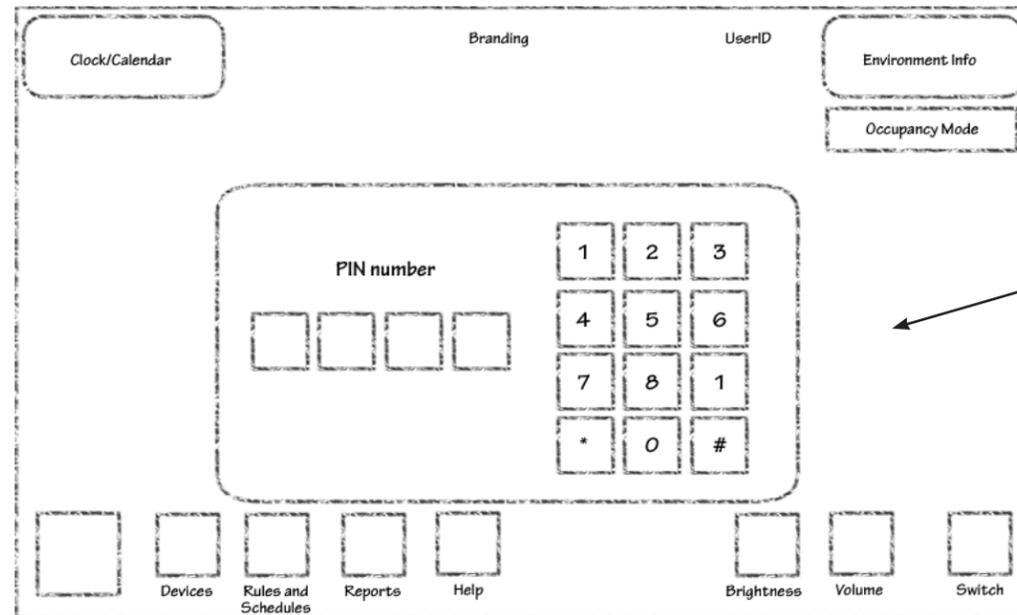

Switch Controls Component

Allows user to control the lighting in the room/area. Either On/Off or a dimmer switch if appropriate.

PIN and Keyboard Entry Components

Launcher Component

Launch Button brings up Pin Number Keypad Entry Component; successful authentication brings up the [dashboard component](#)

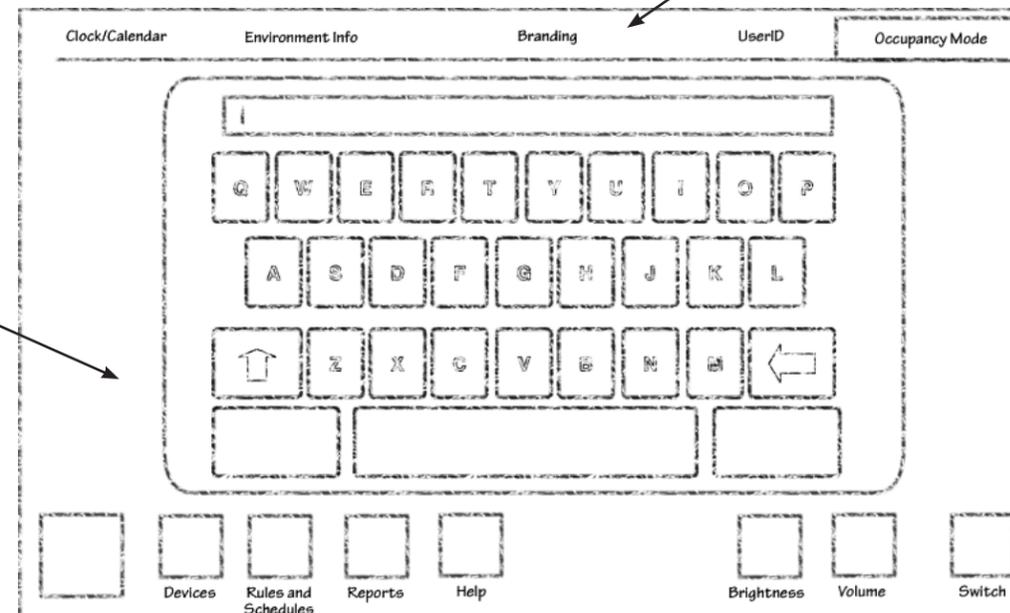

Large or Small Header Component

Pin Number Entry Component
Numeric user entry

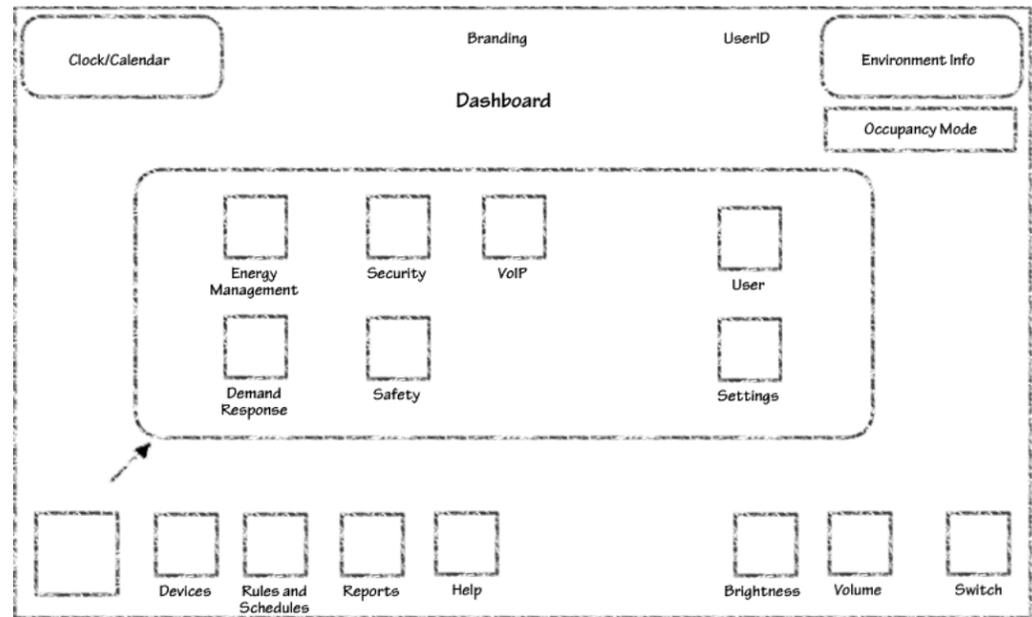

Large or Small Header Component

Keyboard Entry Component

Alpha-numeric user entry

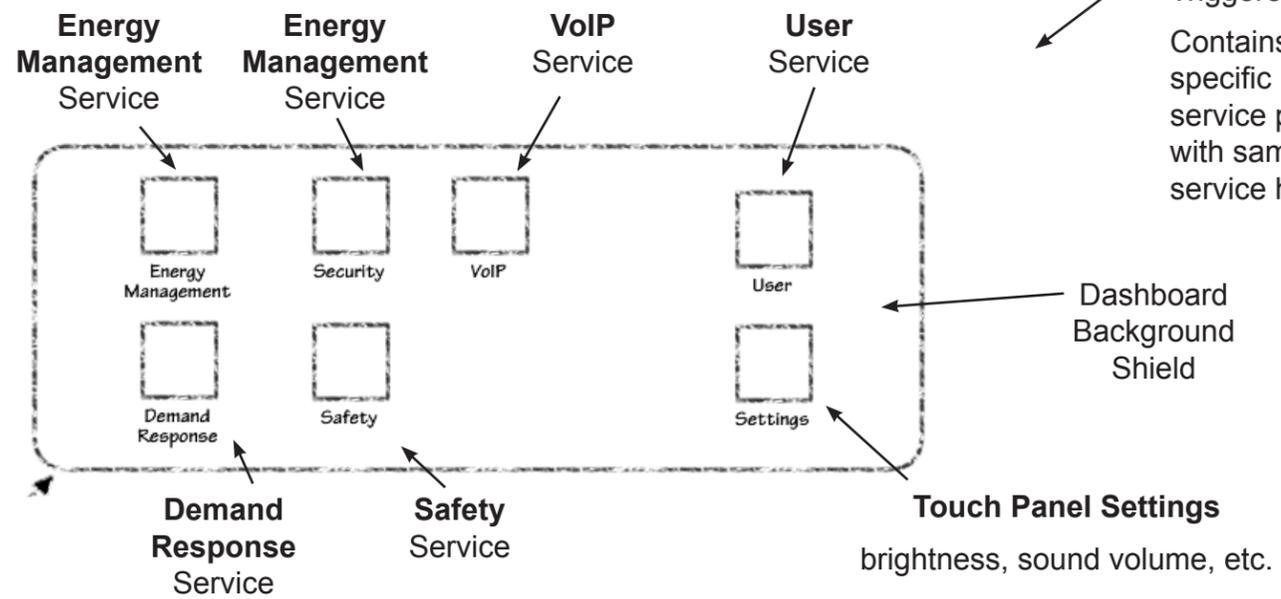

Dashboard Component

Switch button
Returns UI to switch control default

Dashboard Component
Triggered by Launch button.
Contains buttons with service specific icons; selecting a service populates launch button with same icon and loads service homepage into UI.

Time Frame Selector

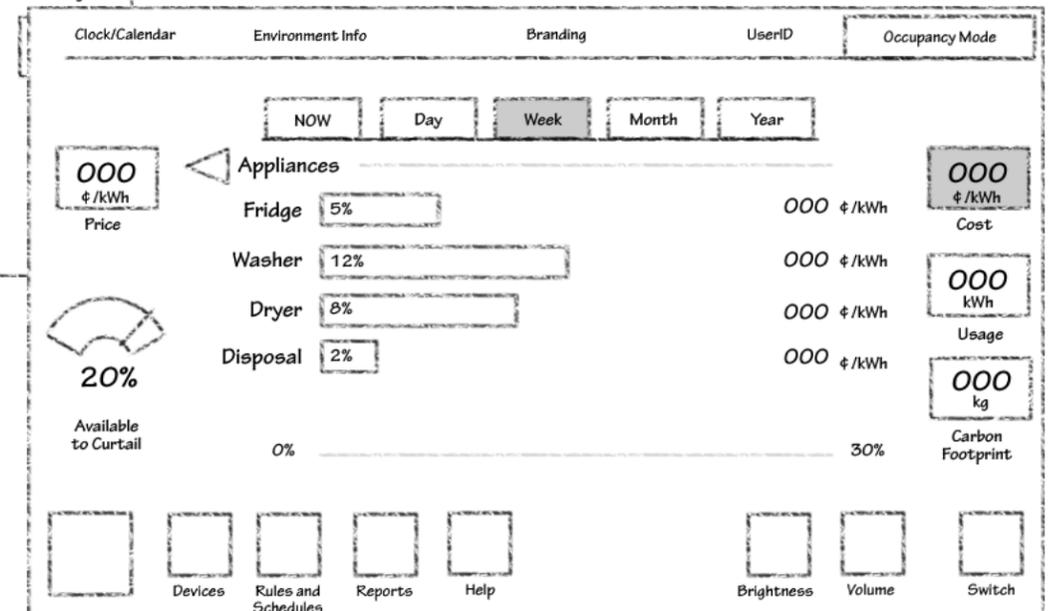

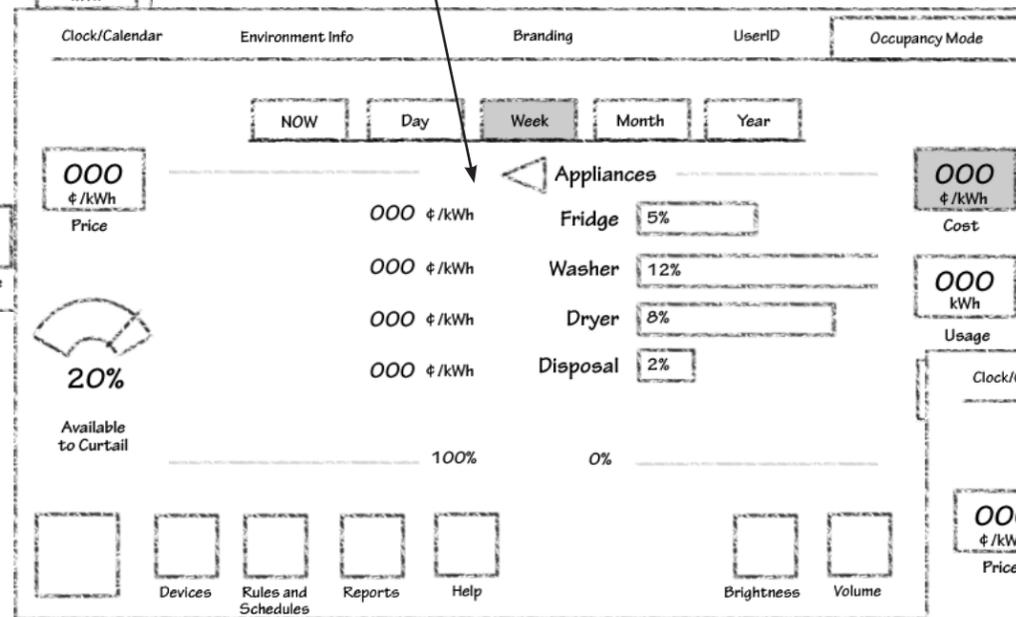

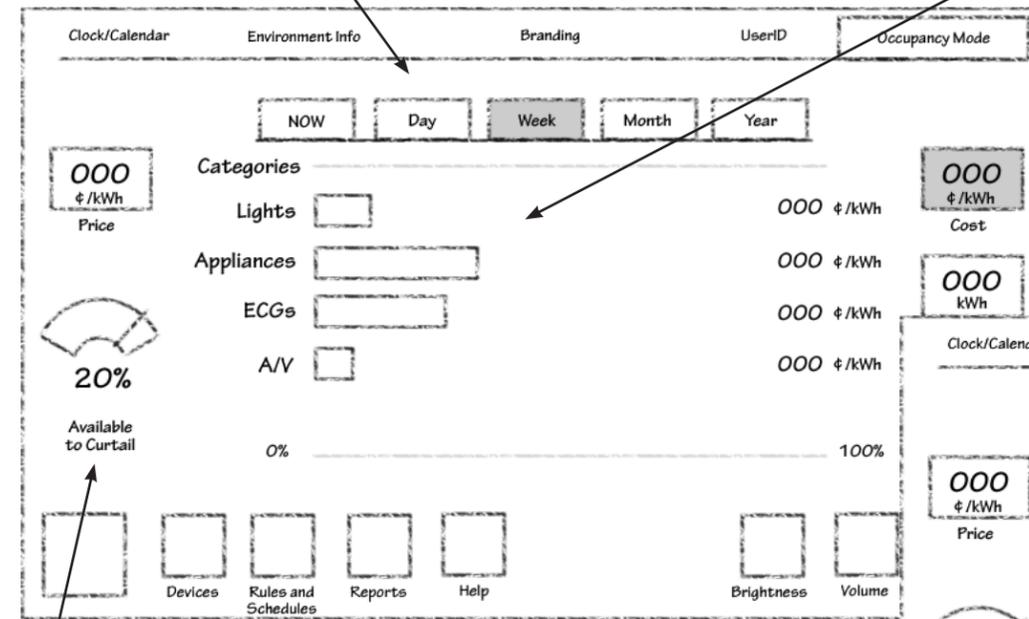

Sliding selector allows user to select billing cycles or present values.

“Month” will display the current billing cycle information if available. Label will then be “Bill Period” or equivalent.

Energy Management Service

Usage Graphs

Shows usage breakdown by items. Selecting item transitions graphs to further breakdown usage.

Energy Management Component

Displays current values for:

Usage in kW

Cost in ¢/kWh

Price in ¢/kW

Carbon Footprint in kg

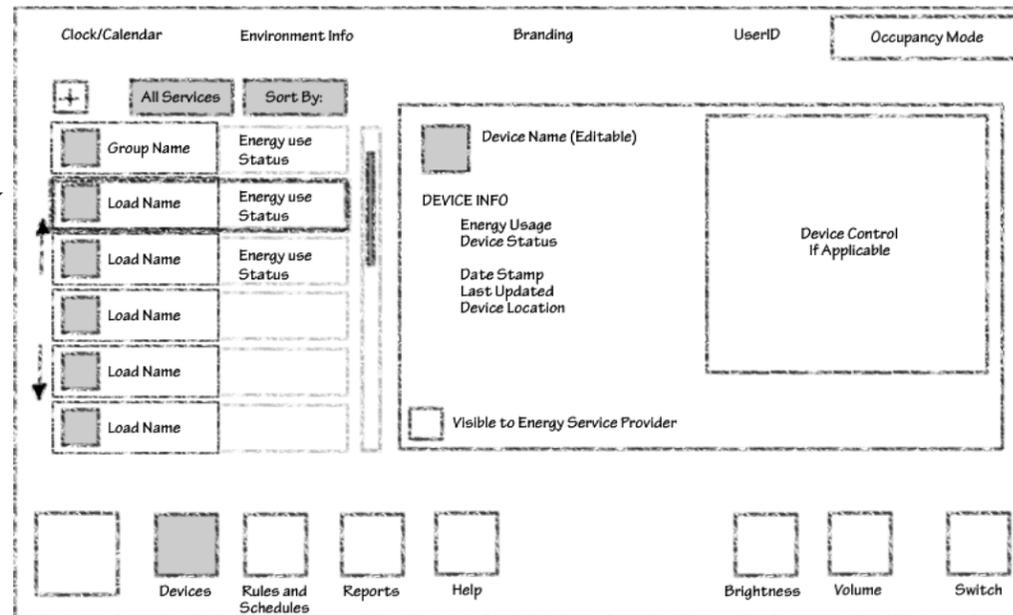

Curtailed Amounts

Shows how much of the usage is available to be curtailed by Demand Response programs, and the estimated savings.

Devices Mode

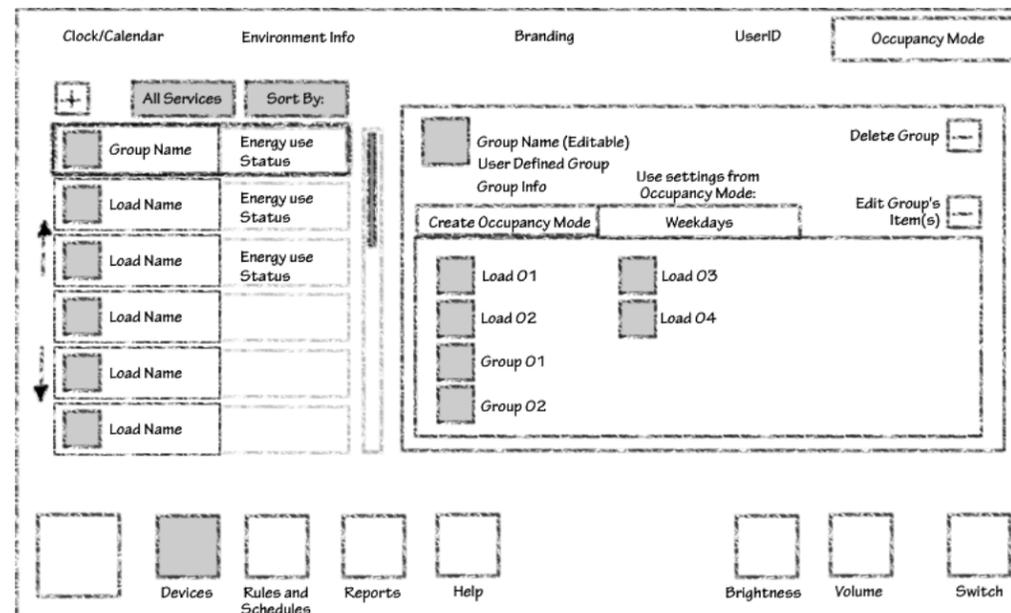

Device function icon in launch component is highlighted

Device List Component

Properties Component - Device Selected:
Contains properties for individual devices (loads)

Properties Component - Group Selected:
Contains properties for device groups
selecting individual item selects item in scrolling list.
selecting delete item(s) allows multiple items to be selected for deletion

Devices Mode -continued-

Device List Component

Scrolling List

Contains available devices (loads) and device groups (both default groups defined by ModBots and user-created groups)

Device or Group Name

Energy use in kW

Status (On, Off, Curtailed, Overridden)

dragging along list causes scroll action; clicking and removing on a specific device or group causes the item in the list to be highlighted, and the properties component to reflect its properties.

Clicking and holding on an item will cause the item to become highlighted and will make it available for dragging within list or to properties component if applicable.

Service Filter drop-down

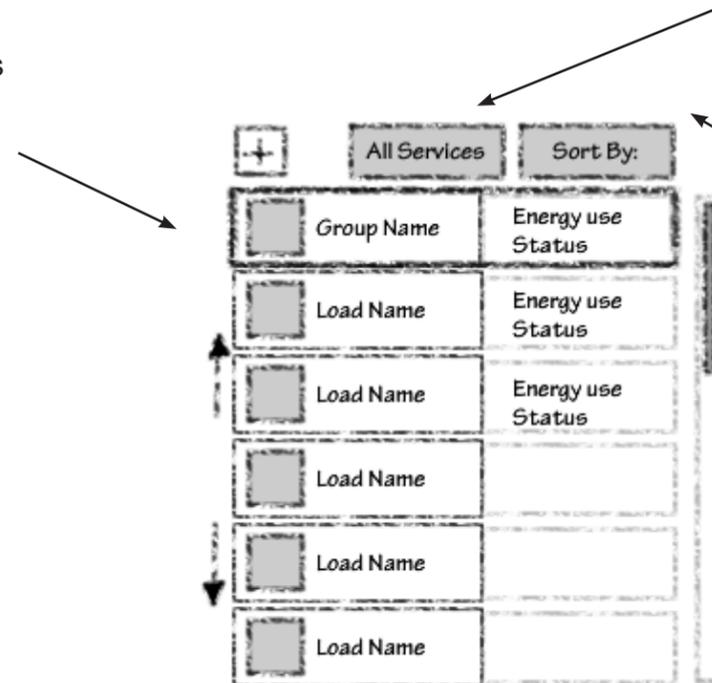

Defaults to devices pertinent to most recent service selected and allows filtering by each service or complete list.

Sort By: sorting drop-down

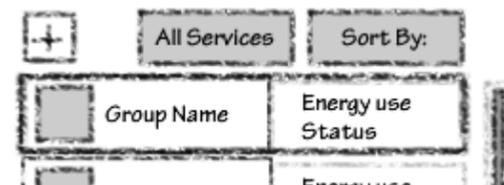

Allows filtering by category, zone, groups only, devices (loads) only.

Scrolling Position Indicator

Shows visible list portion relative to length of entire list. This may need to be used as a control depending on capability of touch panel.

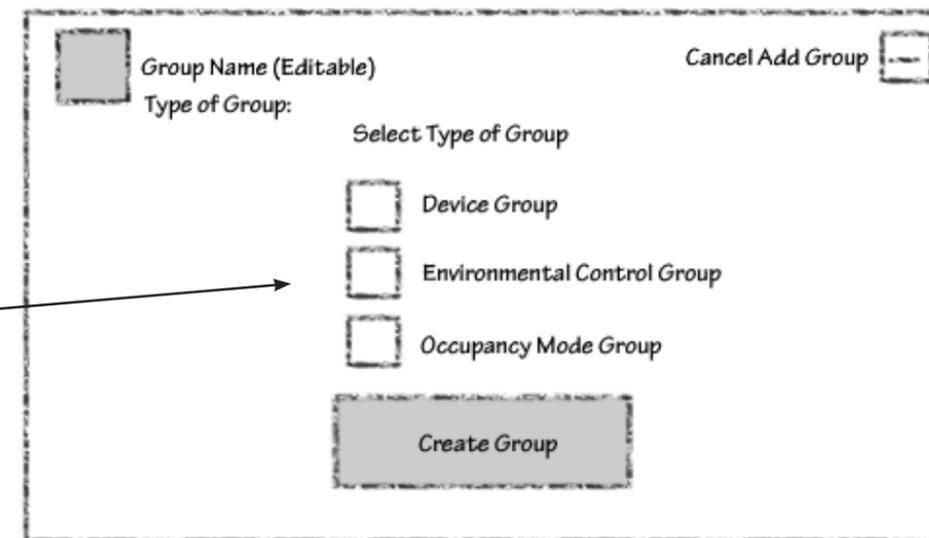

Add Group Button allows user to create new device group.

Type of Group

Drop-down menu allows users to select whether group is a Device Group, ECG group, or Occupancy Mode Group.

Editable text field

Selecting this allows user to enter information; brings up the keyboard entry component.

**Devices Mode
Adding and Removing Groups**

Device Group Properties Component

Allows user to create new groups, edit group names, and add/delete items to groups.

See [Page 11](#) for details.

ECG Group Properties Component

Allows user to select the sources that will be used to heat, cool, and act as the temperature sensor for the ECG.

Allows the user to control the ECG in auto mode, or as a traditional Climate Control System.

See [Page 12](#) for details.

Occupancy Mode Group Properties Component

Allows user to create a group of default states (On, Off, etc.) for each device in the group.

This group can then be activated to quickly control a number of devices.

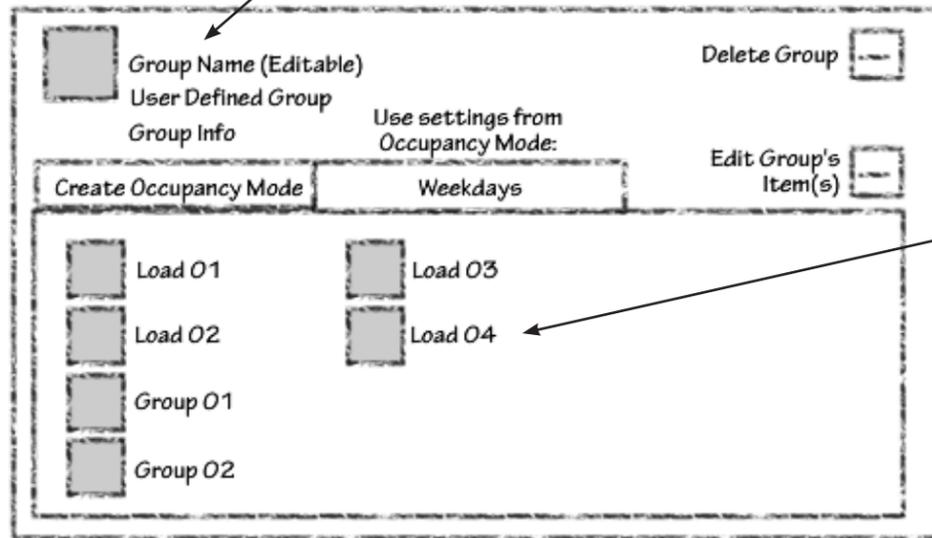

This group can also be used to assign its device states to any other groups that have the same devices included.

See [Page 13](#) for details.

Devices Mode Device Group Properties

Editable text field

Selecting this allows user to enter information; brings up the keyboard entry component

Properties Component - Group Selected

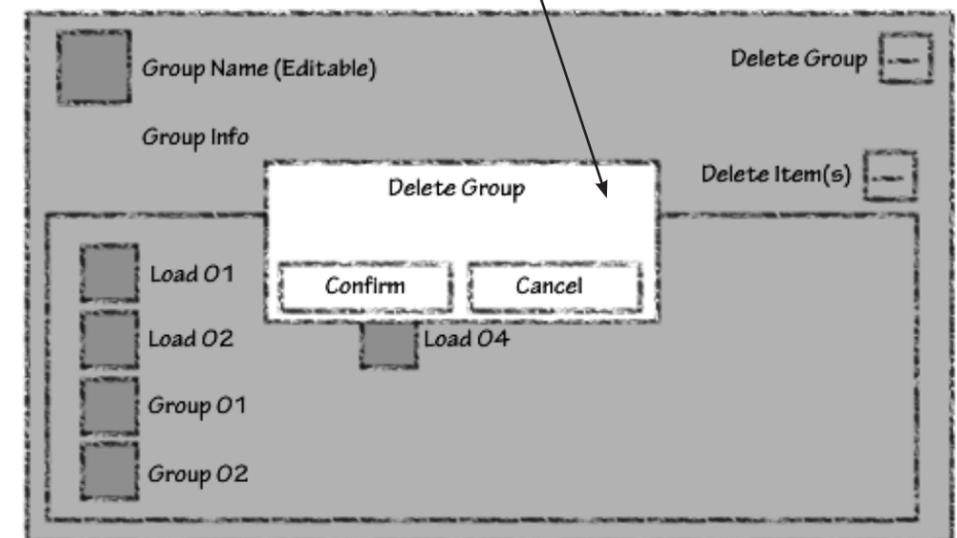

Allows user to create new groups, edit group names, and add/delete items to groups.

Group member item

new groups or loads dragged from device list are added as an item to this group.

Delete Group

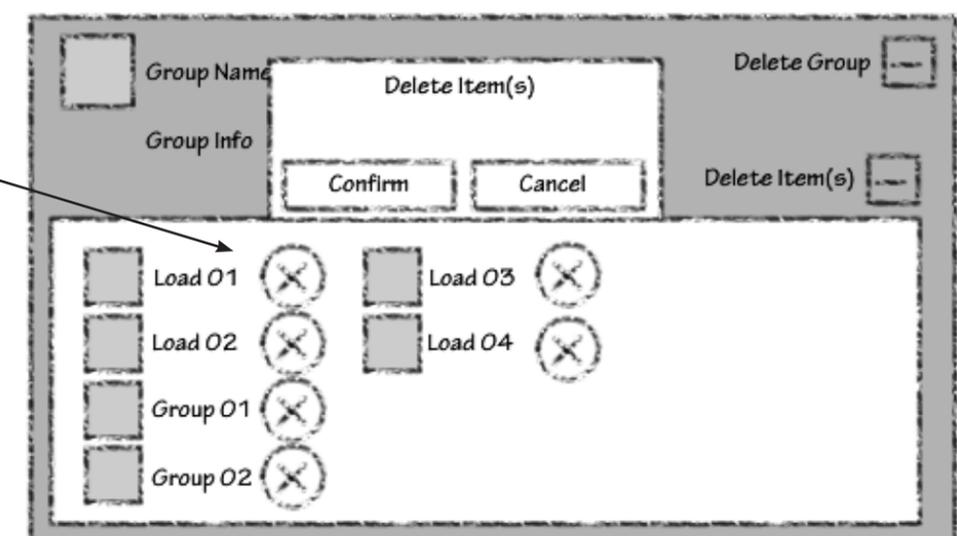

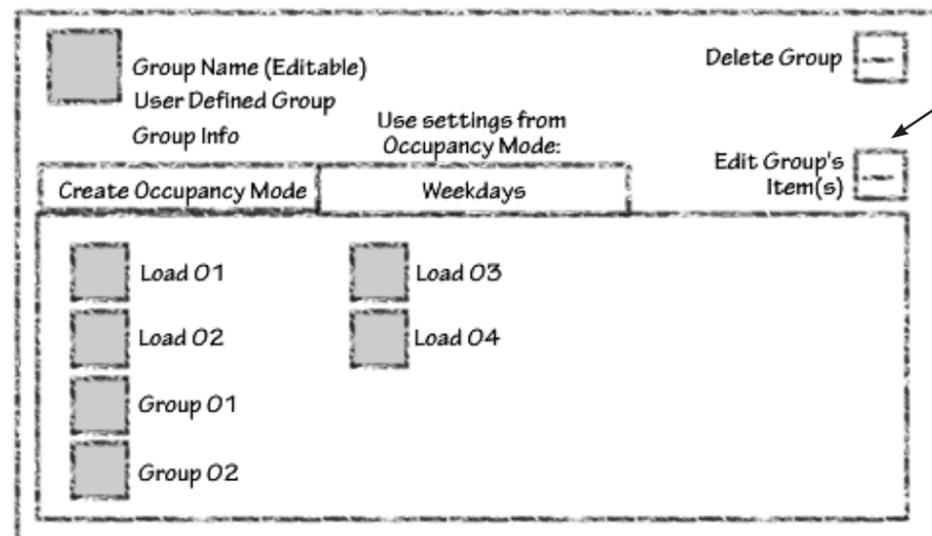

Allows group to be deleted from device list after confirmation dialog box.

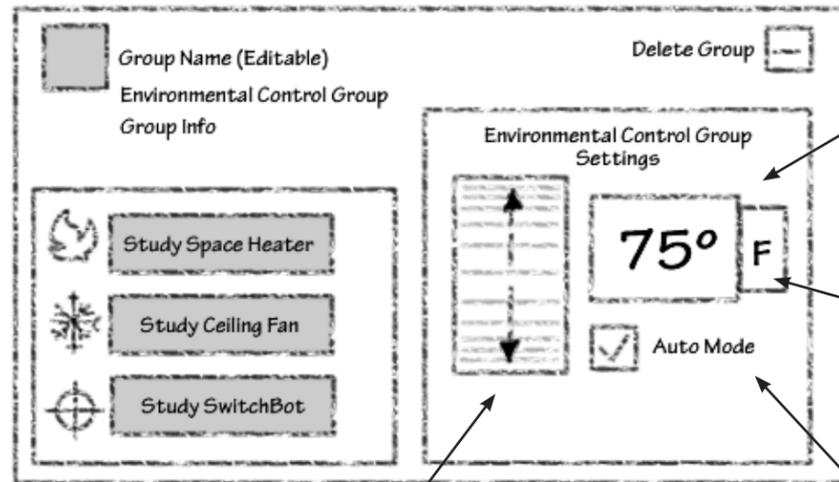

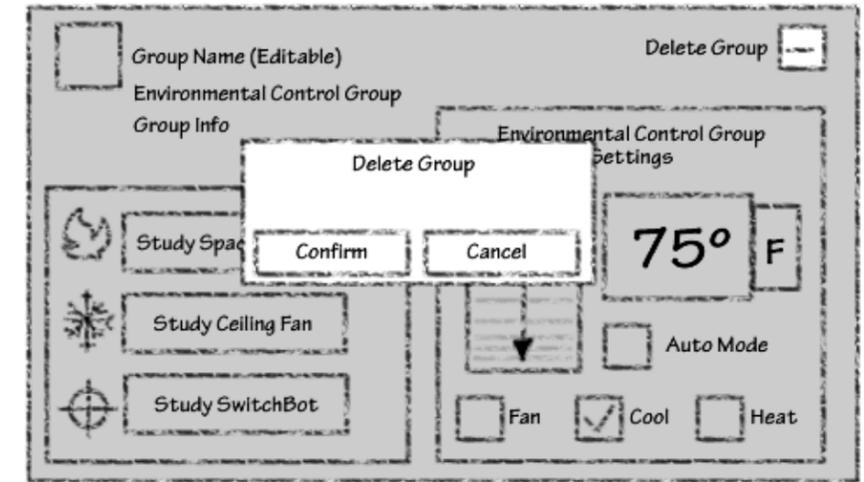

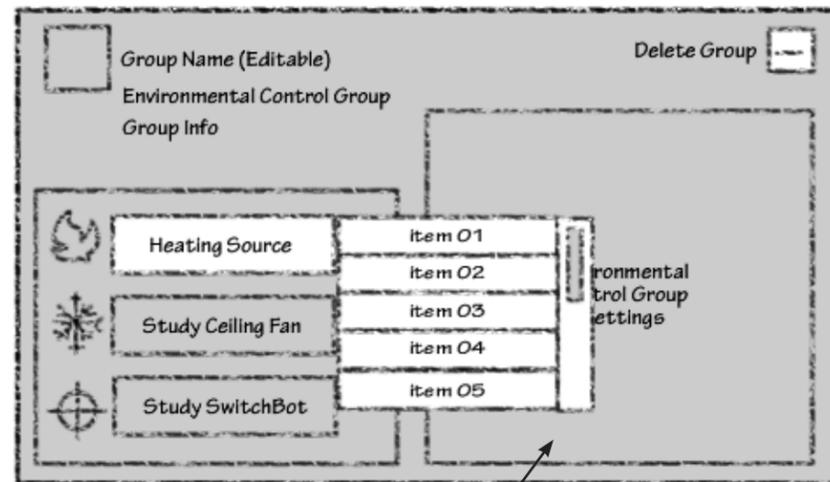

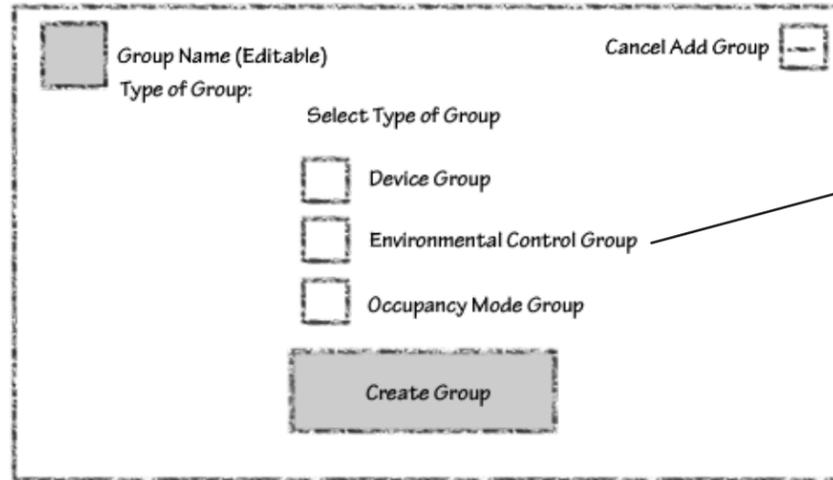

Delete Item(s)

Allows items to be deleted from group after confirmation dialog box.

Selecting delete items displays a confirmation dialog box as well as a delete badge marker by each item. selecting the badge marker highlights the item and the item will be deleted from group upon confirmation.

Devices Mode
Environmental Control Group Properties

Scrolling Numeric Control
Allows scrolling to change a numeric value up or down.

Source Selector Drop-Down Menu

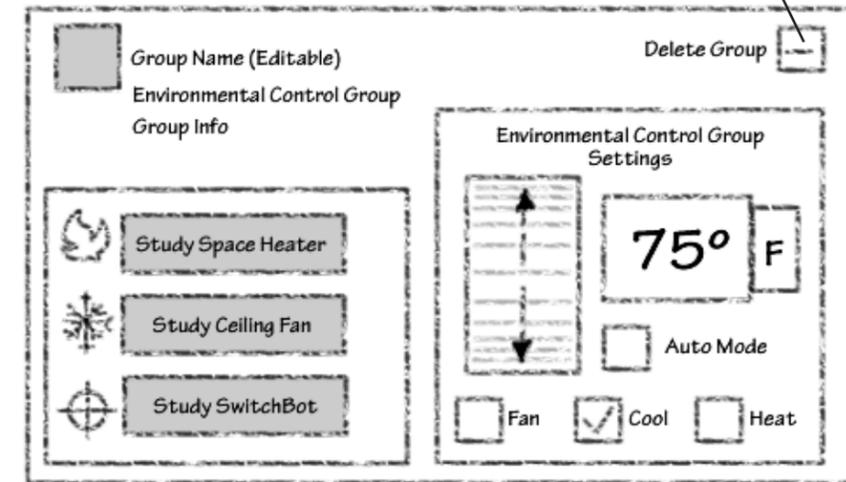

Contains list of devices (Loads) that are appropriate for function. (heating, cooling, and the sensor).

Specifying all three sources brings up the ECG settings panel.

Fahrenheit/Celcius Toggle

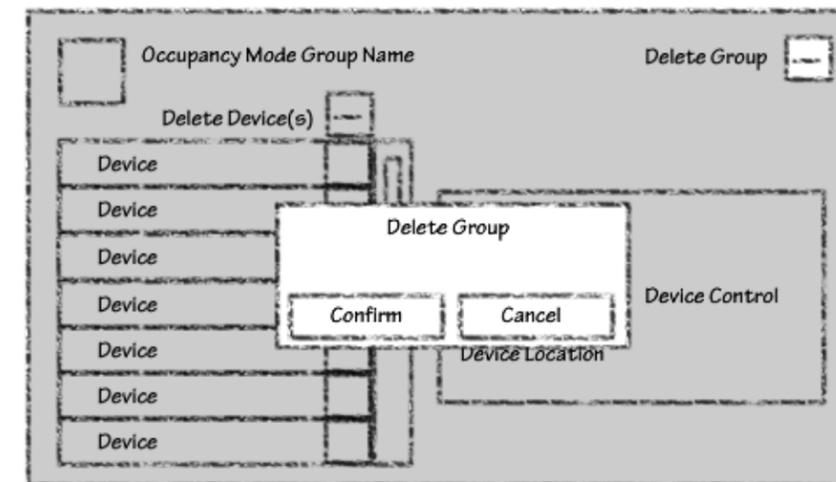

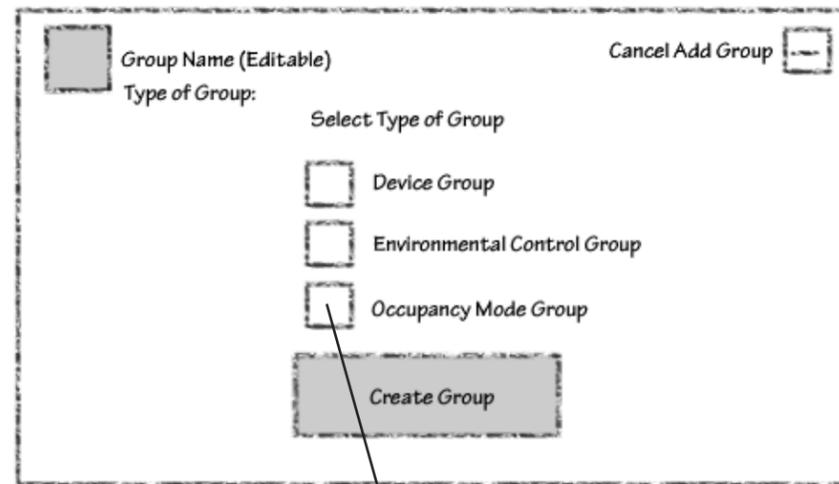

Auto Mode Select

Allows user to switch from Auto Mode to Traditional Climate Control.

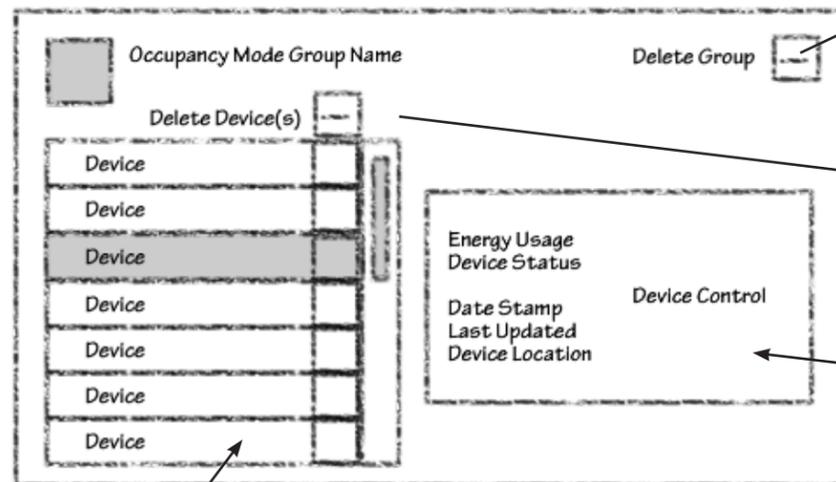

Delete Group

**Devices Mode
Occupancy Mode Groups**

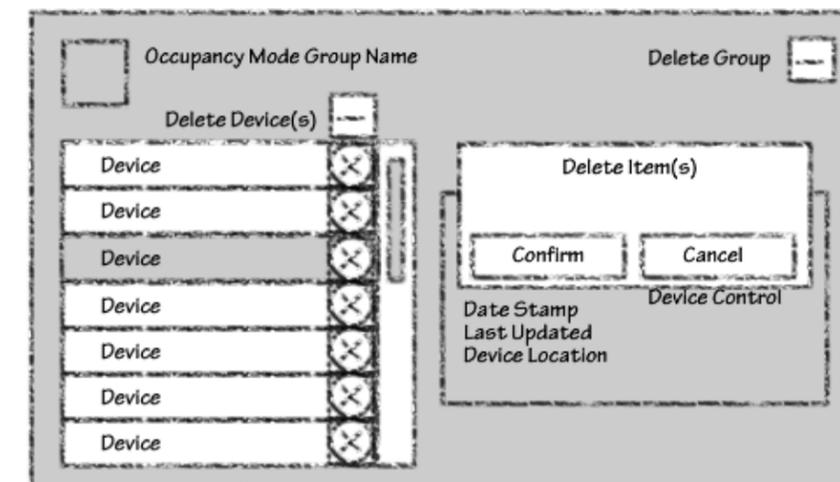

Delete Group
Allows user to delete group following a confirmation modal dialog box.

Delete Device(s)
Allows user to delete one or more devices from list. A modal dialog box will finalize selected devices to be deleted.

Device Info/Control
Shows user info on selected device and allows user to change device settings.

Scrolling Device List
Allows user to see all devices in Occupancy Mode Group and their current status. Allows user to change each devices status as well as add/delete devices from list.

Rules Mode

Rules function icon in launch component is highlighted

Rules List Component

Scrolling List

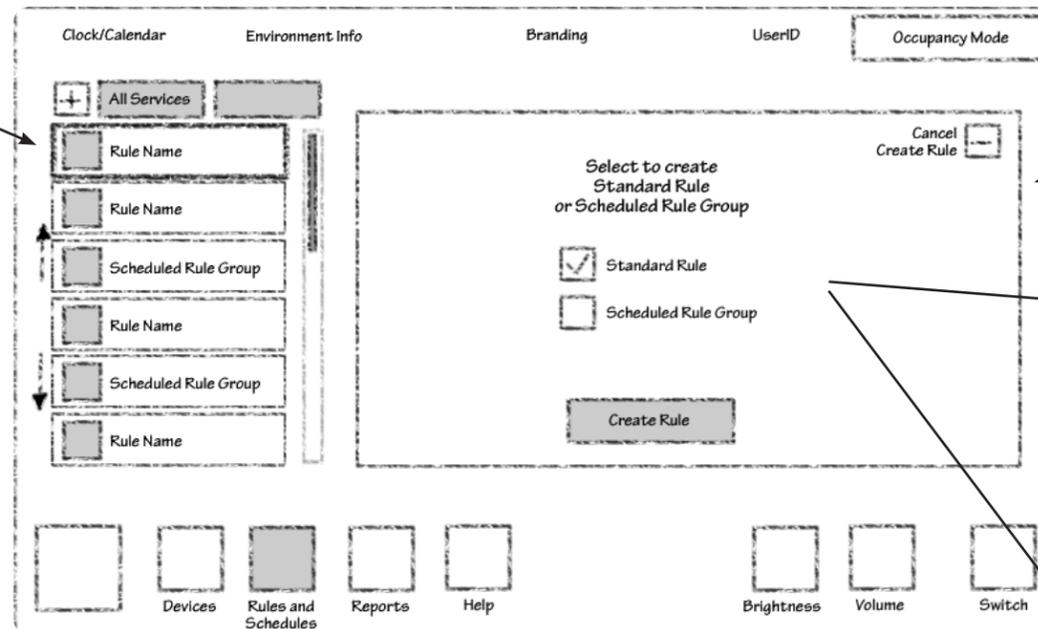

Contains Rules and Scheduled Rule Groups that have been set up using conditions/actions.

Rule Name or Rule Group Name

Active or Inactive state

dragging along list causes scroll action; clicking and removing on a specific item causes the item in the list to be selected, and the properties component to reflect its properties.

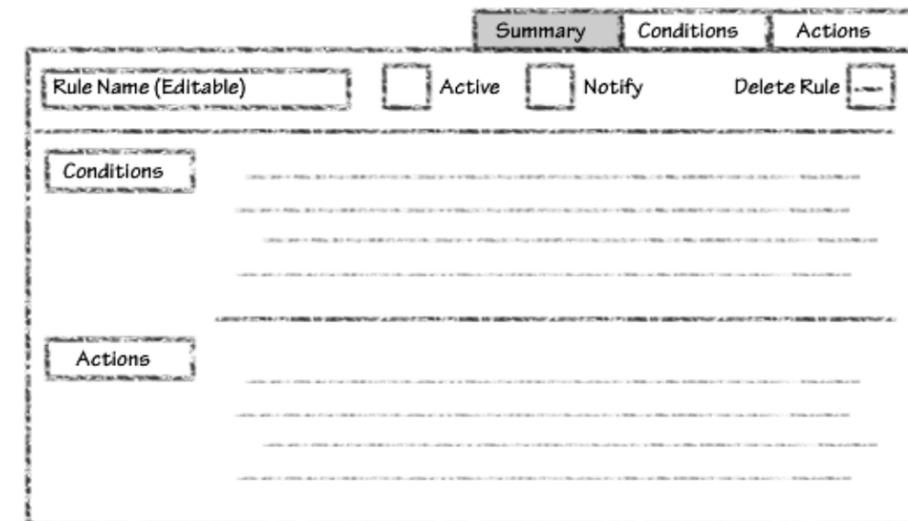

Clicking and holding on an item will cause the item to become highlighted and will make it available for dragging within list.

Properties Component

Contains properties for individual rules when selected in rules list component.

See page 15 for more details.

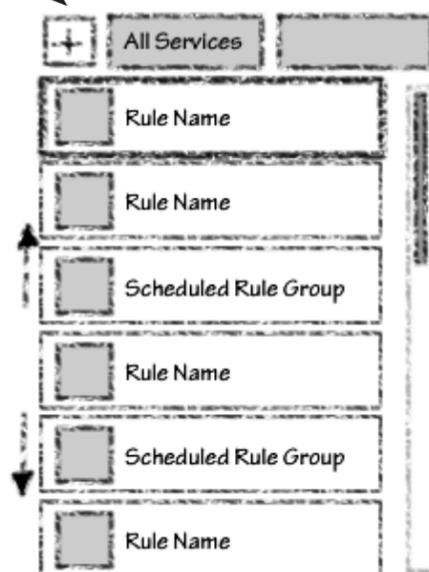

Add Rule Button

allows user to create new Rules and Scheduled Rule Groups.

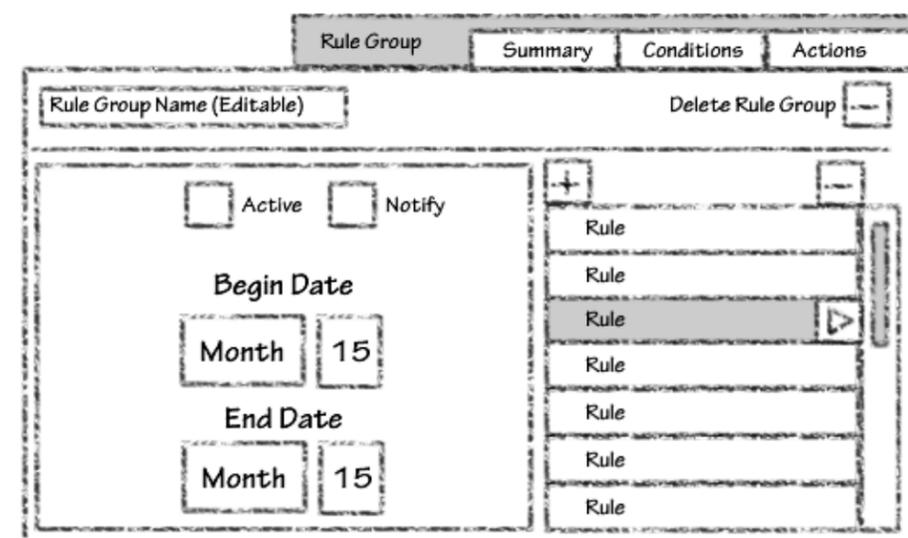

Service Filter drop-down

Defaults to devices pertinent to most recent service selected and allows filtering by each service or complete list.

Scrolling Position Indicator

Shows visible list portion relative to length of entire list. This may need to be used as a control depending on capability of touch panel.

Rules Mode summary Tab

Summary Tab

Displays the information about the rule, including the rule name, the rule conditions and the rule actions. The rule can be activated and deactivated, the name can be edited, and the rule can be deleted from this tab.

Editable text field

Selecting this allows user to enter information; brings up the [keyboard entry component](#).

Active Checkbox

Allow user activate and deactivate rule.

Notify Checkbox

Allows user to specify whether notification (Alert) is sent when rule triggers.

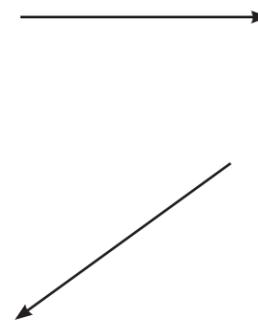

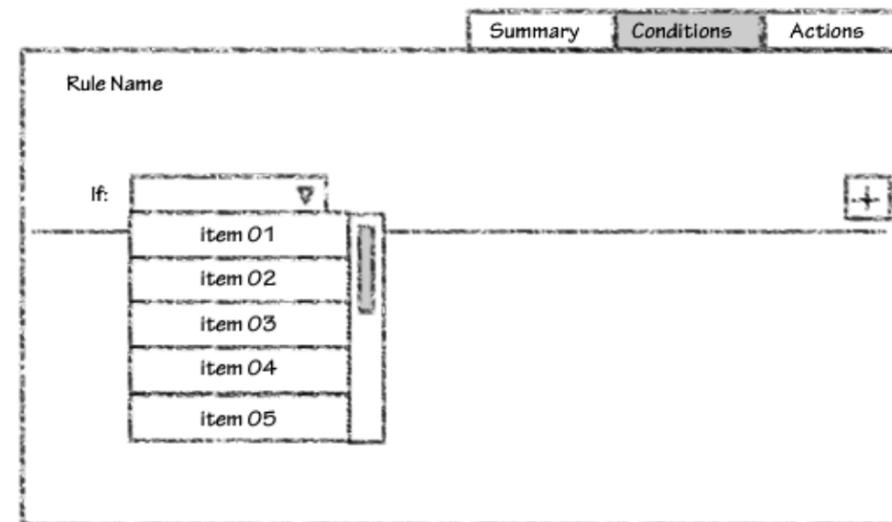

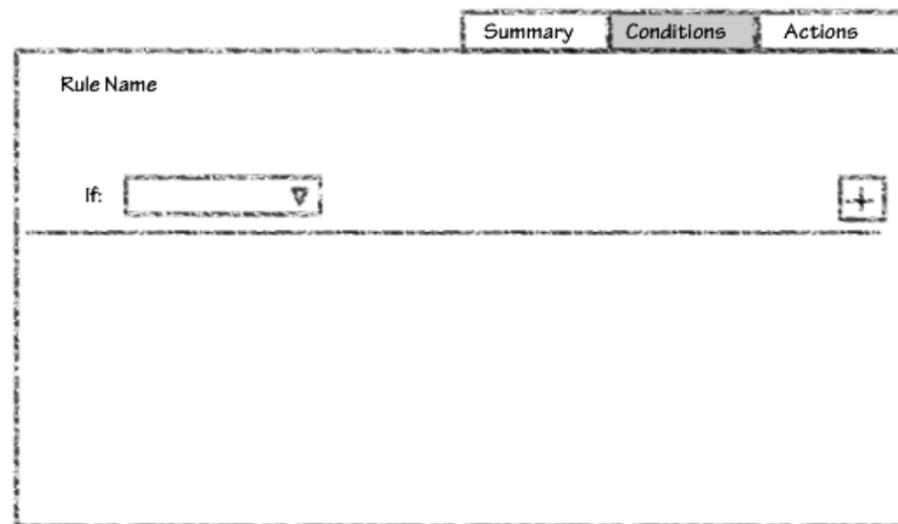

Delete Rule

Allows user to delete rule following a modal confirmation dialog box.

Rules Mode Condition Tab

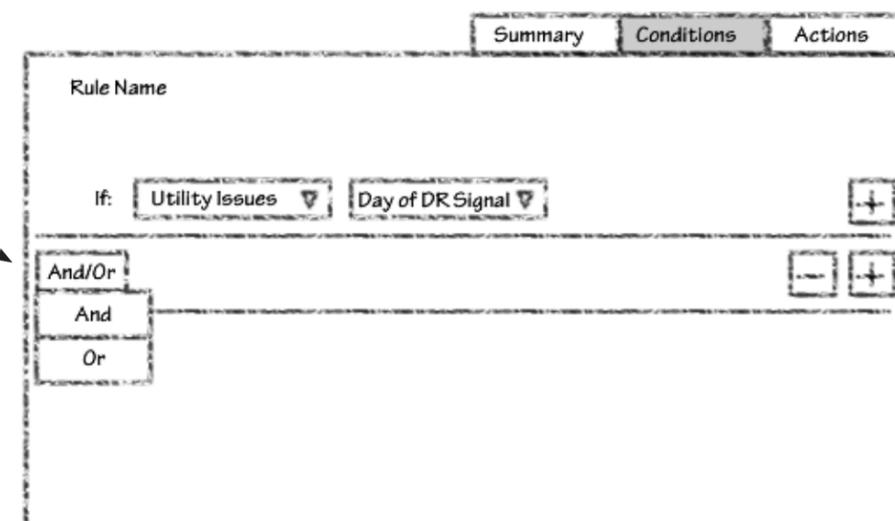

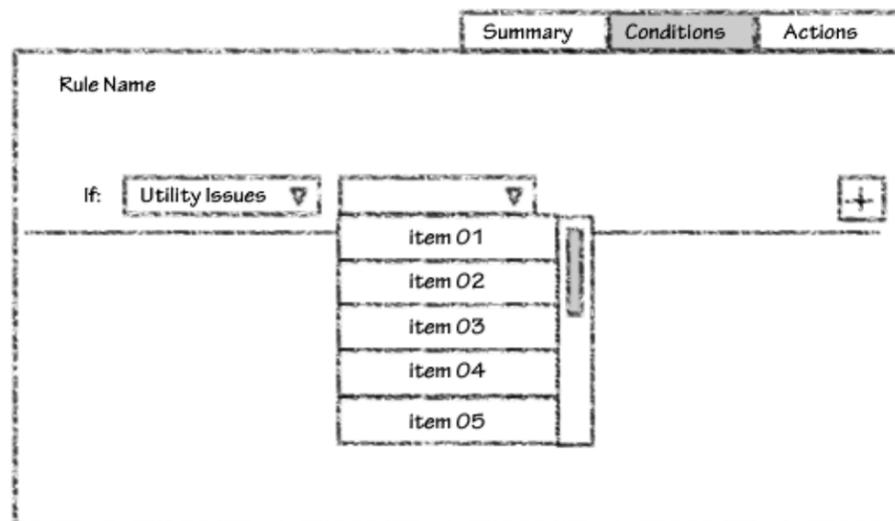

Condition Tab

Conditions are built sequentially using pop-up menus of contextually selected options.

And/Or Selector

Selects logic that will be used to compare each condition in sequential manner.

Add Condition

Allows user to add condition to rule.

Add/Delete Condition

Allows user to add condition to rule, or delete the condition indicated.

Rules Mode
Condition Tab - continued -

And/Or Selector

Selects logic that will be used to compare each condition in sequential manner.

Changes to the logic will be reflected in every condition in the rule.

The screenshot shows a 'Conditions' tab interface. At the top are three tabs: 'Summary', 'Conditions', and 'Actions'. Below is a 'Rule Name' field. The 'If:' section contains two dropdown menus: 'Utility Issues' and 'Day of DR Signal', with a '+' button to the right. Below this are three rows of conditions. Each row starts with an 'And' selector, followed by a 'motion detected' dropdown, a 'by:' label, and a 'sensor device' dropdown. Each row has '-' and '+' buttons to its right.

The screenshot shows the same 'Conditions' tab interface as above. The 'And' selector in the first row has been changed to 'Or'. The rest of the interface, including the 'If:' section and the other two rows of conditions, remains the same.

Rules Mode
Condition Tab - continued -

Condition Selectors

Different conditions will require different selection/entry methods.

Pop Up List Menu

Incremental Numeric Selector

Day/Date/Time Range Selector

Incremental Numeric Selector with entry pad

Rules Mode Actions Tab

Actions

Actions are built sequentially using pop-up menus of contextually selected options.

The screenshot shows a window titled "Rules Mode" with three tabs: "Summary", "Conditions", and "Actions". The "Actions" tab is active. Below the tabs is a "Rule Name" field. Underneath, there are three dropdown menus labeled "Device", "On/Off", and "Timeframes", followed by a plus sign button (+).

The screenshot shows the same "Rules Mode" window with the "Actions" tab active. It displays two rows of action configuration. The first row has dropdown menus for "Device", "On/Off", and "Timeframes", followed by a plus sign button (+). The second row is preceded by the word "And:" and contains the same three dropdown menus, followed by a minus sign button (-) and a plus sign button (+).

Add Action

Additional actions can be added, but logic will always be "AND" between actions for a rule.

Rules Mode Scheduled Rules Group

Scheduled Rules Groups

A group of rules that has a time schedule for when they are active/inactive.

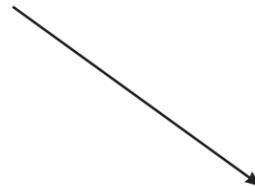

Scrolling Rules List

Rules can be added/deleted from the group.

Selected Rule

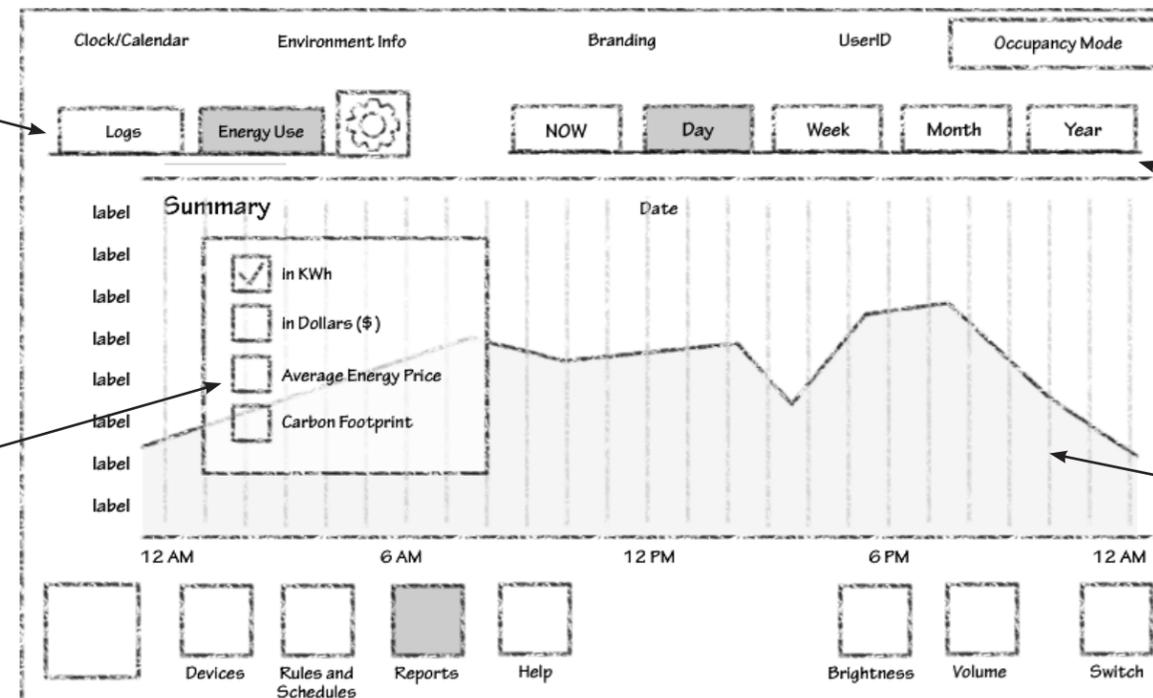

Allows rule to be edited in same fashion as normal rules; using conditions and actions.

Reports Mode

Report Display Selector Tab

Allows user to select between Energy Use, which is displayed as graphical information, and Logs, which are textual information.

Time Frame Selector

Allows the user to select the time frame for the report information.

Report Data Display Area

Presents the user with graphical or textual information based on the parameters set in the parameters component.

Area can be scrollable to select prior periods in the same time period scale.

Report Data Type Selector

Allows users to set data type of the report information.

Partial transparency allows user to see graphical information underneath. (depends on graphical compositing capability of hardware.)

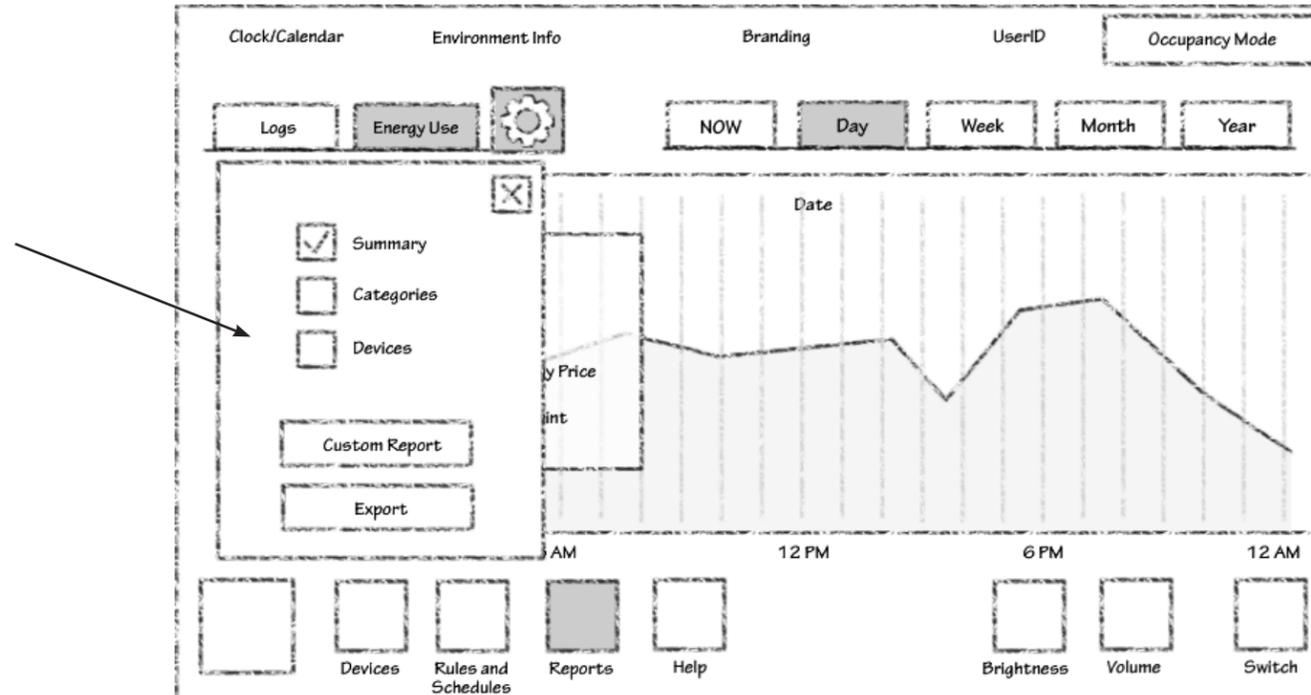

Reports Mode

Energy Use Report Configuration Menu

Triggered by Configuration button at top.

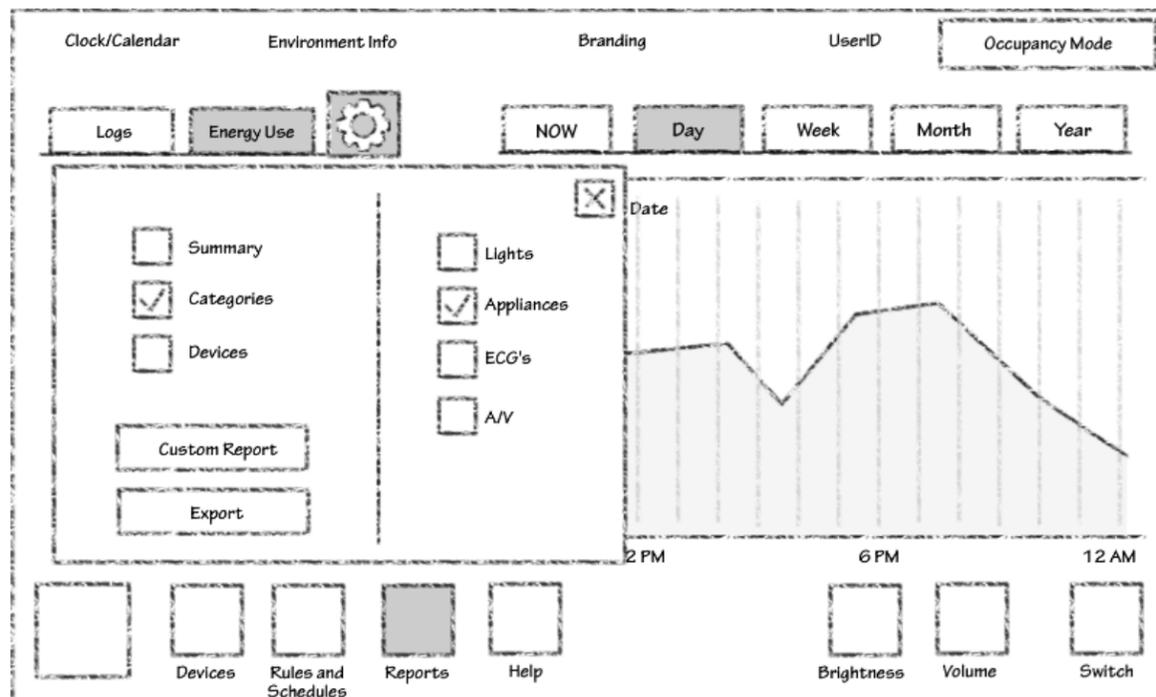

Allows user to select the type of information to be graphed, either Energy Use Summary, Energy Use Categories, or Energy Use by Device(s).

Also allows user to create a customized report and to export reports. (Currently only in web version).

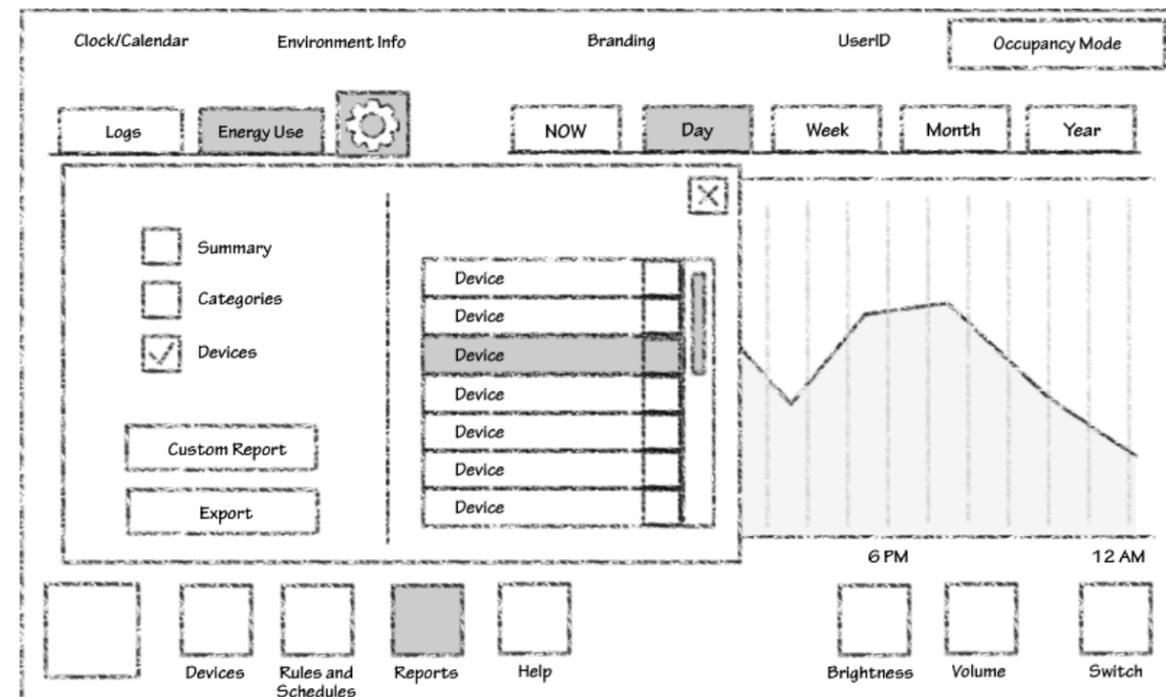

Energy Usage Report Menu - Summary (Default)

Energy Usage Report Menu - Categories

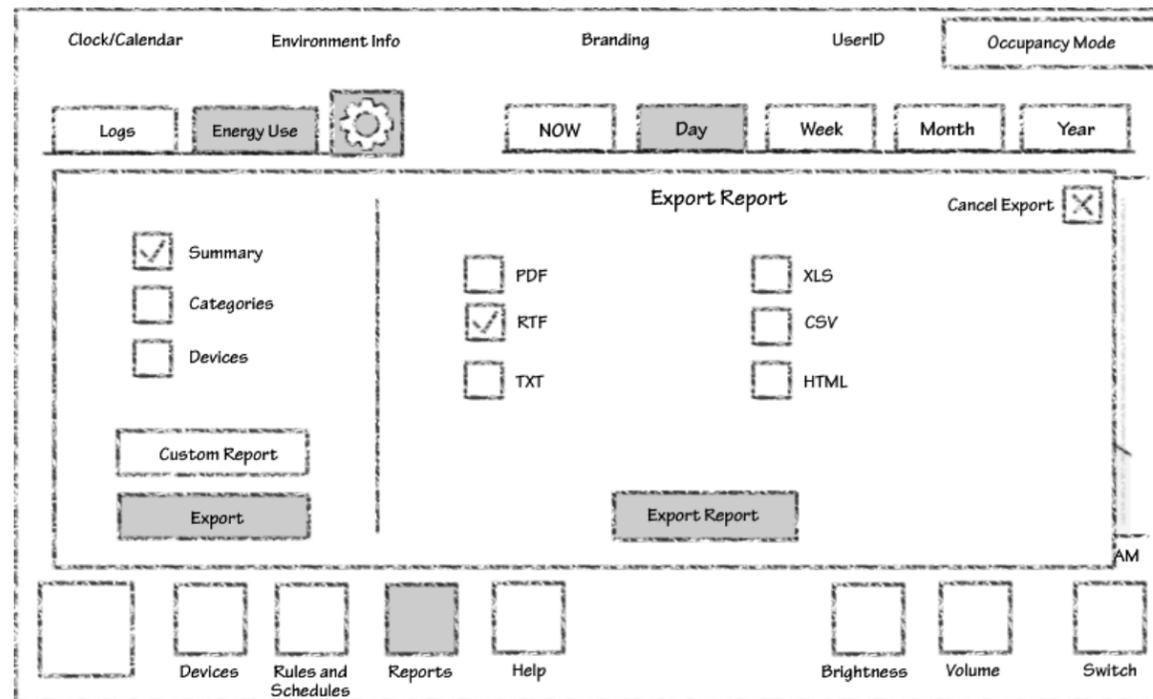

Energy Usage Report Menu - Devices

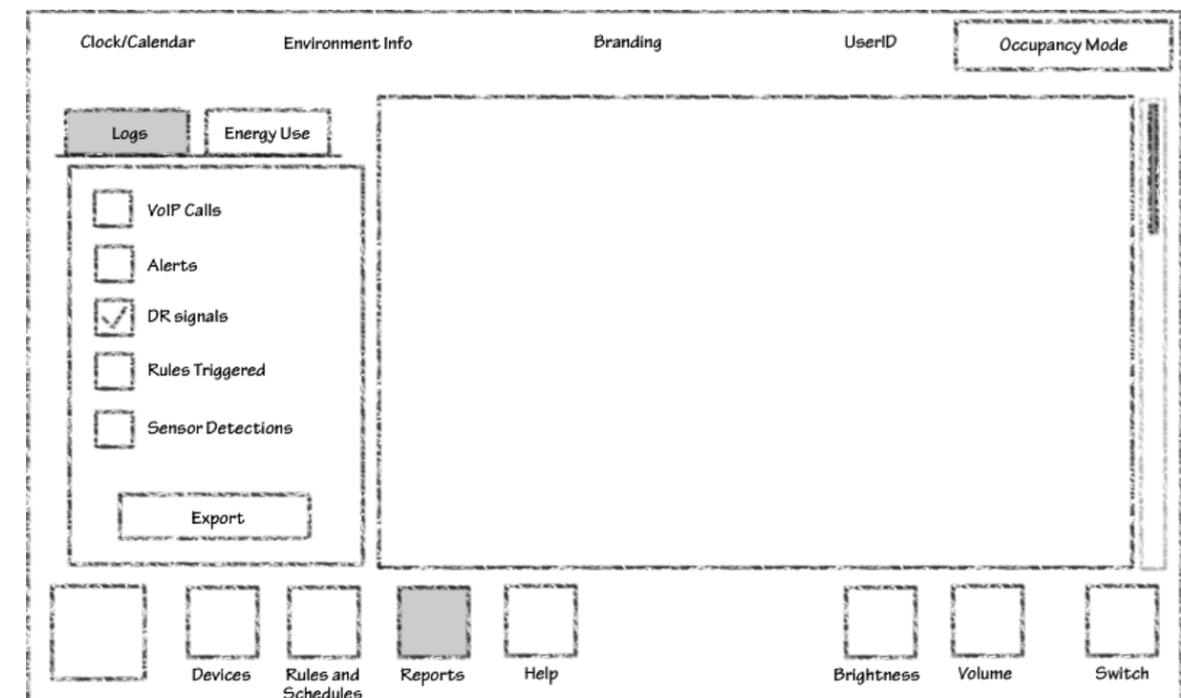

Reports Mode

Energy Usage Report Menu - Export Report

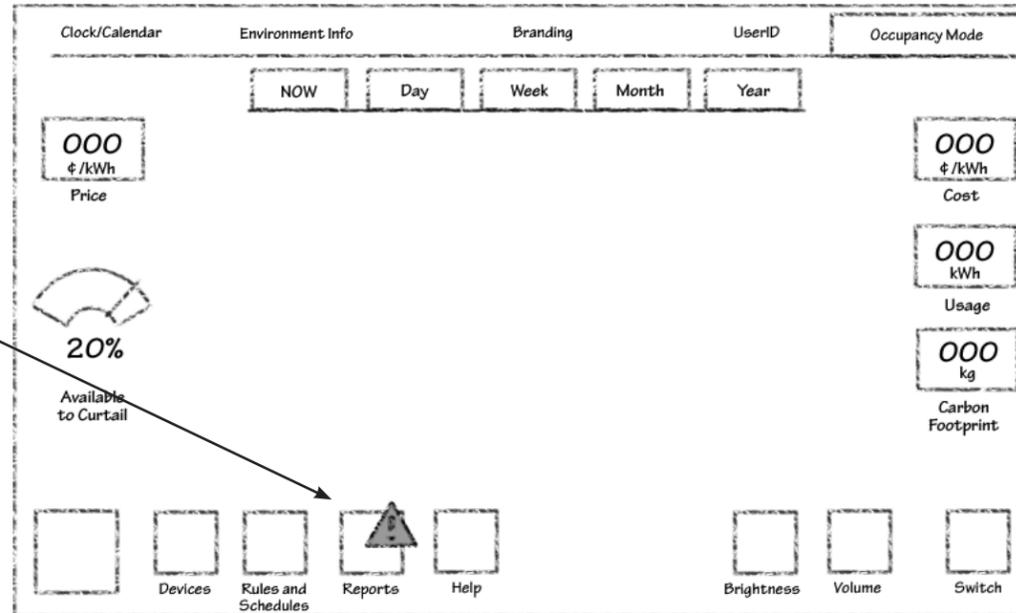

Logs Report Menu

Alert Notification Mode

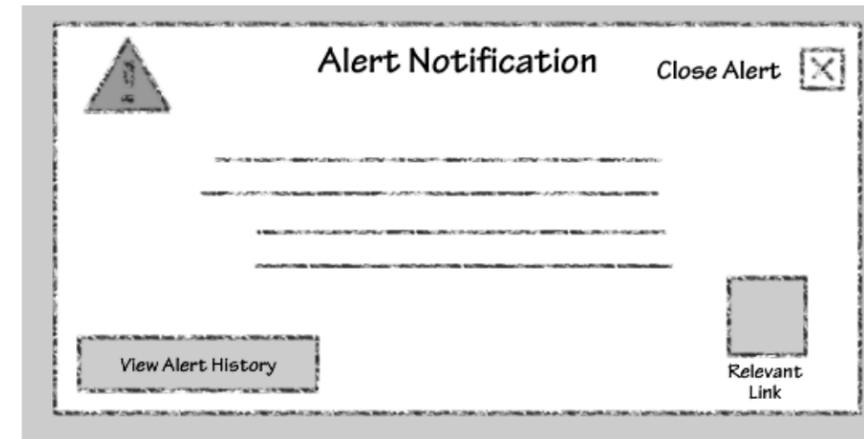

Low Priority Alert

This mode places an icon badge on the **Reports** function button to notify user that a new alert has been added to the reports available.

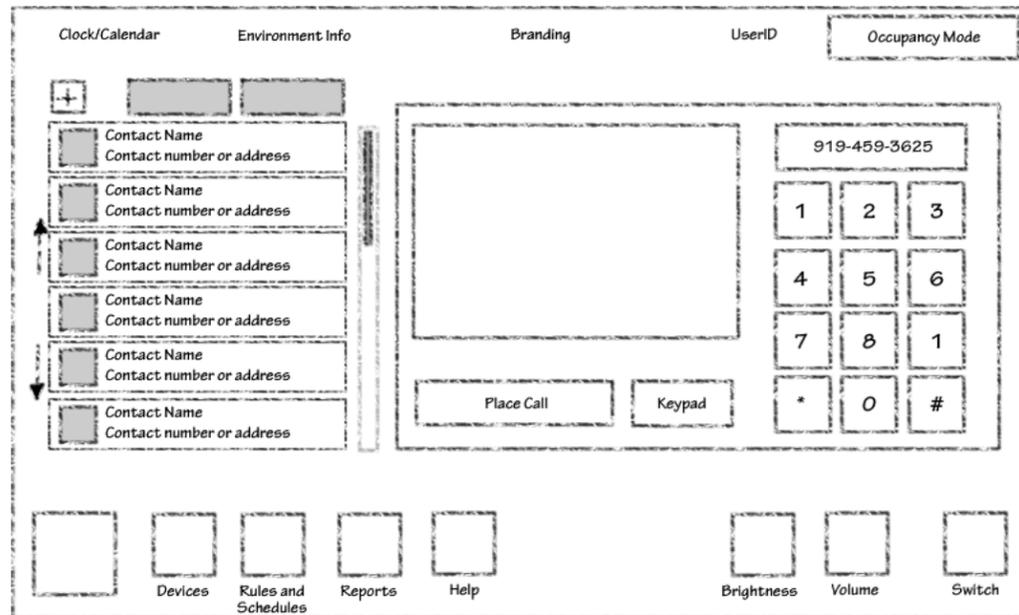

High Priority Alert

This mode superimposes a modal dialog box upon the UI requiring the user to acknowledge the alert and possibly to take steps to address the issue being raised by the alert.

VoIP Service

VoIP service

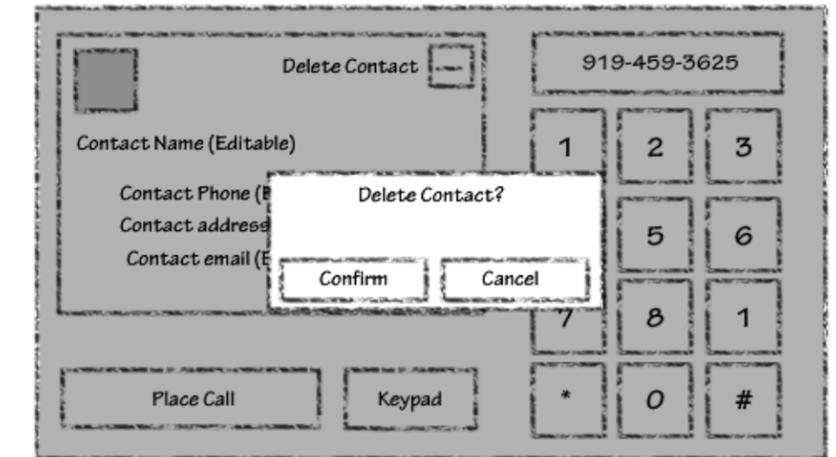

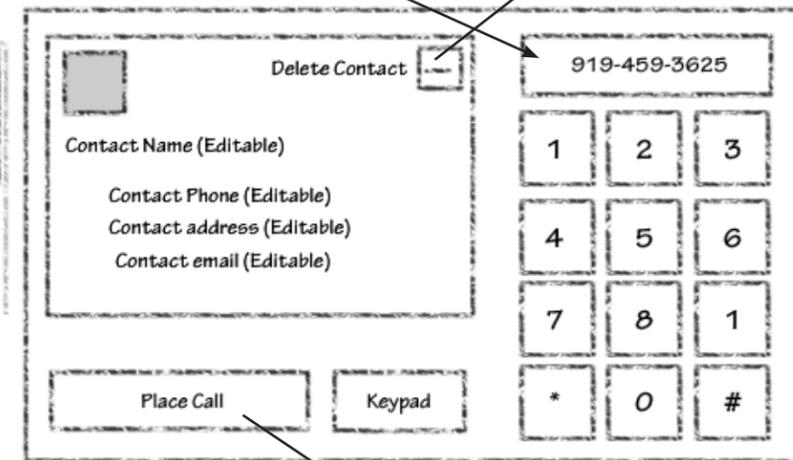

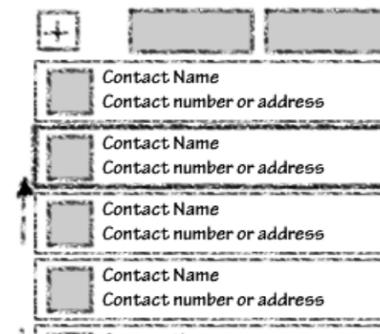

Interface loads upon selecting VoIP from the dashboard menu of services.

This service allows users to create a list of contacts, and make phone calls over the internet using the list of contacts or a conventional keypad.

Contact Scrolling List Component

The list contains contacts that the user has entered into the system.

dragging along list causes scroll action; clicking and removing on a specific device or group causes the item in the list to be selected (highlighted), and the properties component to reflect its properties. The contact's number will populate the field above the keypad.

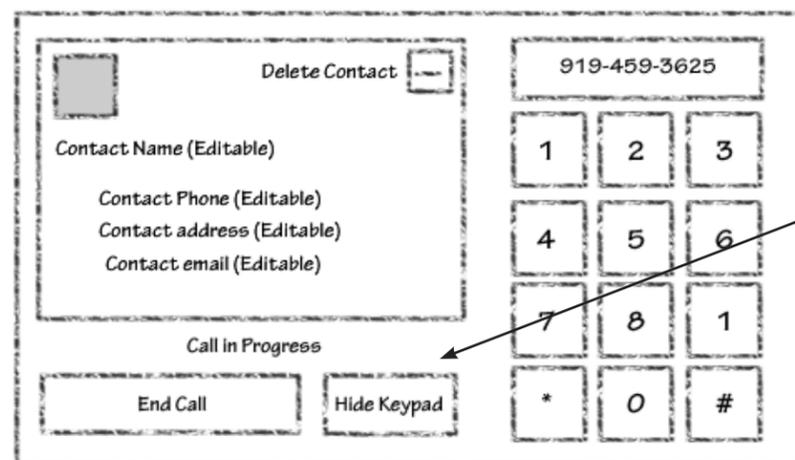

Delete Contact

Selecting delete contact allows the user to delete the contact from the list, following a confirmation dialog.

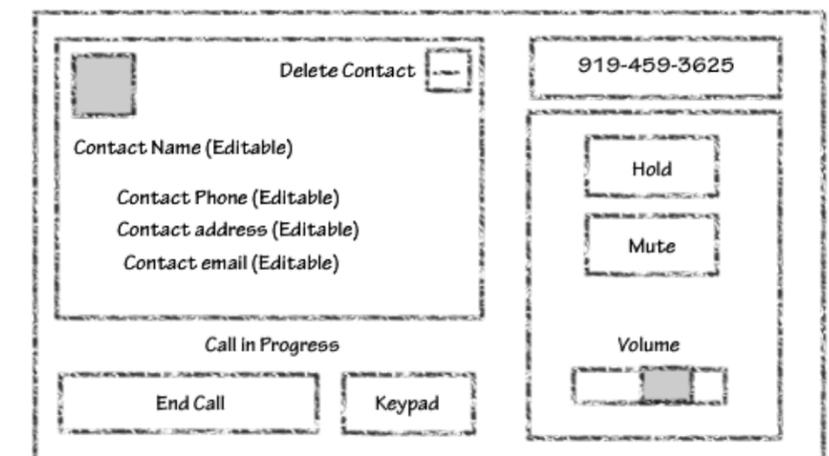

Keypad During Call

The user can access the keypad at any time during a call by clicking on the keypad/ hide keypad toggle button. (This might be necessary for entering in tones as prompted by automated phone systems.)

Place Call

Selecting place call will dial the contact selected. If no contact is selected, place call will dial the number entered by the keypad will be dialed.
